

AgentNap — Reclaim the RAM your AI coding agents are leaking

The problem: 32GB machines gasping for air

Claude Code, Codex, Cursor and MCP servers spawn hundreds of child processes. When sessions close unclearly they become orphans — each holding 200MB–1GB of RAM until you reboot.

It is not just you: the claude-code issue tracker documents machines at 12GB, 60GB, even 108GB (issues #23252, #18859, #56960). The author's Mac hit ~400 agent processes and 26.5GB of swap.

The fix: clean the garbage, never touch live work

AgentNap is a FREE, open-source, zero-dependency CLI:

- `agentnap advise` — plain-language diagnosis: what eats RAM, what is safe to reclaim now, what is your call.
- `agentnap reap` — removes ONLY orphaned processes (parent already dead), gracefully (SIGTERM → grace → SIGKILL). Dry-run by default.
- `agentnap daemon` — background watchdog that acts only on real macOS memory-pressure signals.
- `agentnap stats` — receipts: total RAM reclaimed so far.
- `advise --ai` — optional personalized plan from YOUR OWN LLM key (DeepSeek/OpenAI/Ollama — any OpenAI-compatible API).

THE GUARANTEE: the only automatic action is reaping orphaned, idle, non-GUI agent processes. Anything that could touch a live session is surfaced as advice.

Independently verified — not just claimed

- Safety audit by an independent AI model (DeepSeek): 4/4 safety claims PASS; findings fixed before release.
- Repeatable experiment: 5 real orphans + 1 active look-alike — 5/5 detected and reaped, the active process untouched. Runs in CI on clean GitHub macOS AND Windows runners on every push.
- Field result on the author's machine in one day: swap 26.5GB → 5.2GB, memory pressure WARNING → normal, zero interrupted sessions.

Try it in 30 seconds

```
git clone https://github.com/nguyennngocduyphuc/agentnap && cd agentnap && ./install.sh
```

```
agentnap advise → agentnap reap --apply → agentnap stats
```

Full support on macOS; Windows beta (`advise/status/reap`). Pro (menu-bar app, fully automatic) waitlist: [GitHub Issue #1](#).
